Abstract of corresponding document: **KR20050003952**

PURPOSE: A baccarat game assembly is provided to allow a user to easily play the variants, so called "baccarat plus", of the baccarat card game. **CONSTITUTION:** The baccarat game assembly includes: a computer process; a display(120); and an input, having at least one user-operating selector(140). The computer processor generates a player's suit and a banker's suit according to the rule of the baccarat game. At least one of the both suits has a firstly-identifiable and a firstly-hidden card. The computer processor designates one of the suits as a user's suit and the other thereof as a house suit and then generates a new card correspondingly to the input of the user so that he/she selectively discards the firstly-identifiable card and completes the suits. Besides, the computer processor selectively adds a card to the player's and banker's suit according to the existing rule.
